Document Licensing

This presentation is released under the Creative Commons License CC BY-NC-SA 3.0 as defined here: <https://creativecommons.org/licenses/by-nc-sa/3.0/legalcode>

According to CC BY-NC-SA 3.0 permission is granted to share this document, i.e. copy and redistribute the material in any medium or format, and to adapt it, i.e. remix, transform, and build upon the material under the following conditions:

1. **Attribution** — You must give appropriate credit, provide a link to the license, and indicate if changes were made. You may do so in any reasonable manner, but not in any way that suggests the licensor endorses you or your use.
2. **NonCommercial** — You may not use the material for commercial purposes.
3. **ShareAlike** — If you remix, transform, or build upon the material, you must distribute your contributions under the same license as the original.
4. **No additional restrictions** — You may not apply legal terms or technological measures that legally restrict others from doing anything the license permits.

A clarification concerning point 2: non-commercial usage means that this tutorial is not allowed to be used in a commercial training course. It is, however, allowed to use this tutorial for learning about the presented topics within commercial companies or projects.

A brief introduction to CityGML and 3DCityDB

3D City Models in CityGML

Application independent Geospatial Information Model

for semantic 3D city and landscape models

- ▶ comprises **different thematic areas** (buildings, vegetation, water, terrain, traffic, tunnels, bridges etc.)
- ▶ **International Standard of the Open Geospatial Consortium**
 - V1.0.0 adopted in 08/2008; **V2.0.0 adopted in 3/2012**
- ▶ **Data model (UML) + Exchange format** (based on GML3)

CityGML represents

- ▶ 3D geometry, 3D topology, semantics, and appearance
- ▶ in 5 discrete scales (Levels of Detail, LOD)

Disaster management

Kreis Recklinghausen

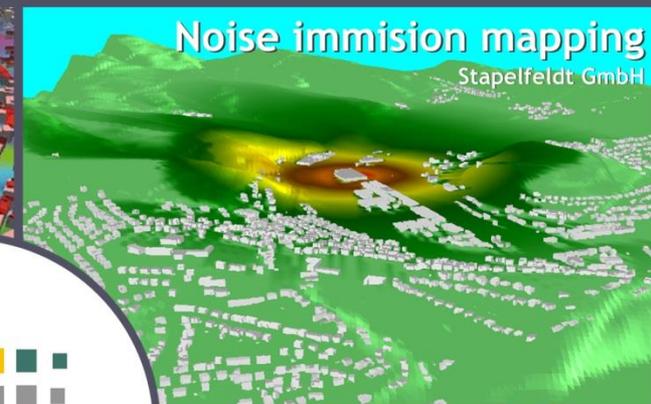

Radio network planning

T-Mobile

Noise immision mapping

Stapelfeldt GmbH

CityGML Training Course

Please note that this training course was produced in the year 2008 by the Institute for Geodesy and Geoinformation Science at Technical University Berlin. The course was held in 2008 and 2009 within the "EduServ" distance e-learning program of EuroSDR. Since the contents are still mostly up-to-date and the original web pages are no longer online, we present the course here. A flash browser plugin is required to view the interactive presentations with full video recordings of my explanations. The overall production and technical concept of the presentation was done by Robert Kaden. He won the **CATCON 5 Award on Computer Assisted Teaching** of the International Society for Photogrammetry and Remote Sensing at the ISPRS Congress 2008 in Beijing.

- Thomas H. Kolbe

3D City Database (3DCityDB)

- ▶ “A free **Open Source** (Apache License, Version 2.0) package consisting of a database schema and a set of software tools **to import, manage, analyse, visualize, and export** virtual 3D city models according to the **CityGML** standard.” **(The latest major release: v3.3.0)**
- ▶ The 3D City Database is currently being developed jointly by the following cooperation partners lead by Prof. Thomas H. Kolbe
 - Chair of Geoinformatics, Technical University of Munich
 - virtualcitySYSTEMS GmbH, Berlin
 - M.O.S.S. Computer Grafik Systeme GmbH, Taufkirchen

3D City Database software suite

▶ 3D City Database

- Oracle/PostGIS Relational Geodatabase Schema
- SQL scripts and functions

▶ Import/Export Tool

- CityGML Import/Export of arbitrary file sizes (>>4GB)
- KML/COLLADA/gITF Exporter for 3D visualization
- Plugins (e.g. Spreadsheet Generator)

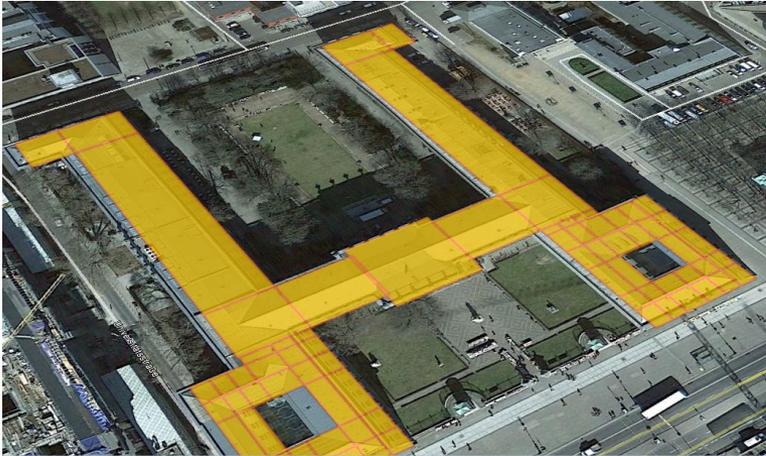

▶ Web Feature Service

- Implemented against the OGC WFS 2.0 interface
- Satisfies the *WFS Simple* conformance class

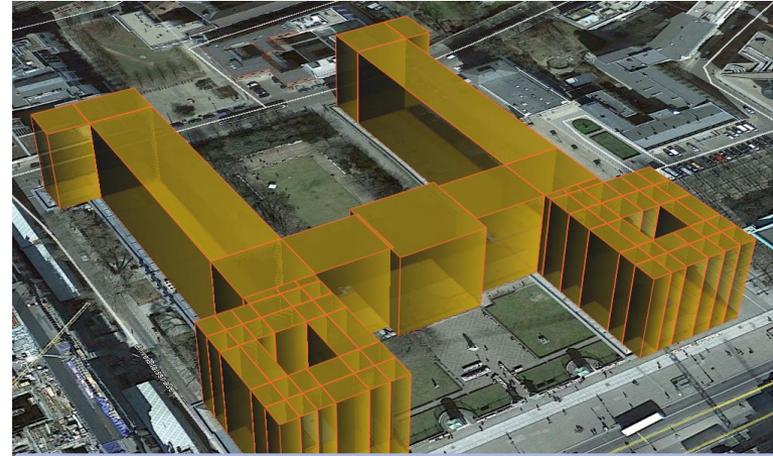

▶ 3DCityDB-Web-Map-Client (or called 3D Web Client)

- Static web client for interactive 3D exploration and manipulation
- Cloud-based linking of 3D objects with thematic data

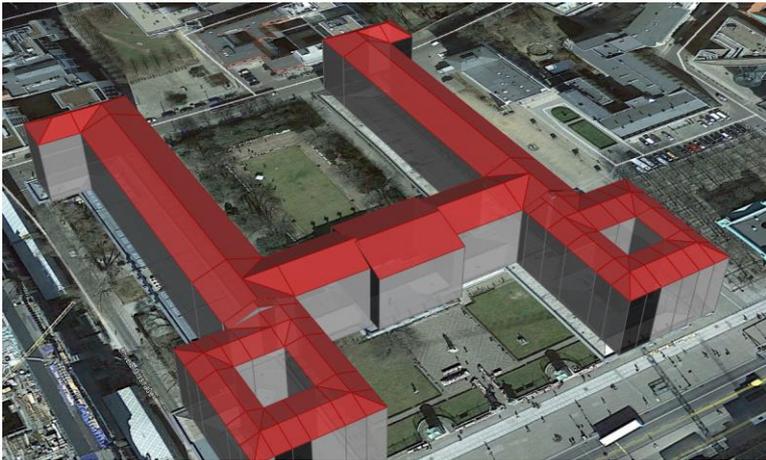

Different display forms of visualization models

 LoD0 - Footprint

 LoD1 - Extruded

 COLLADA.  LoD2 - Geometry only

 COLLADA.  LoD2 - Geometry & Textures

A simple grid-based tiling strategy for the export of visualization models

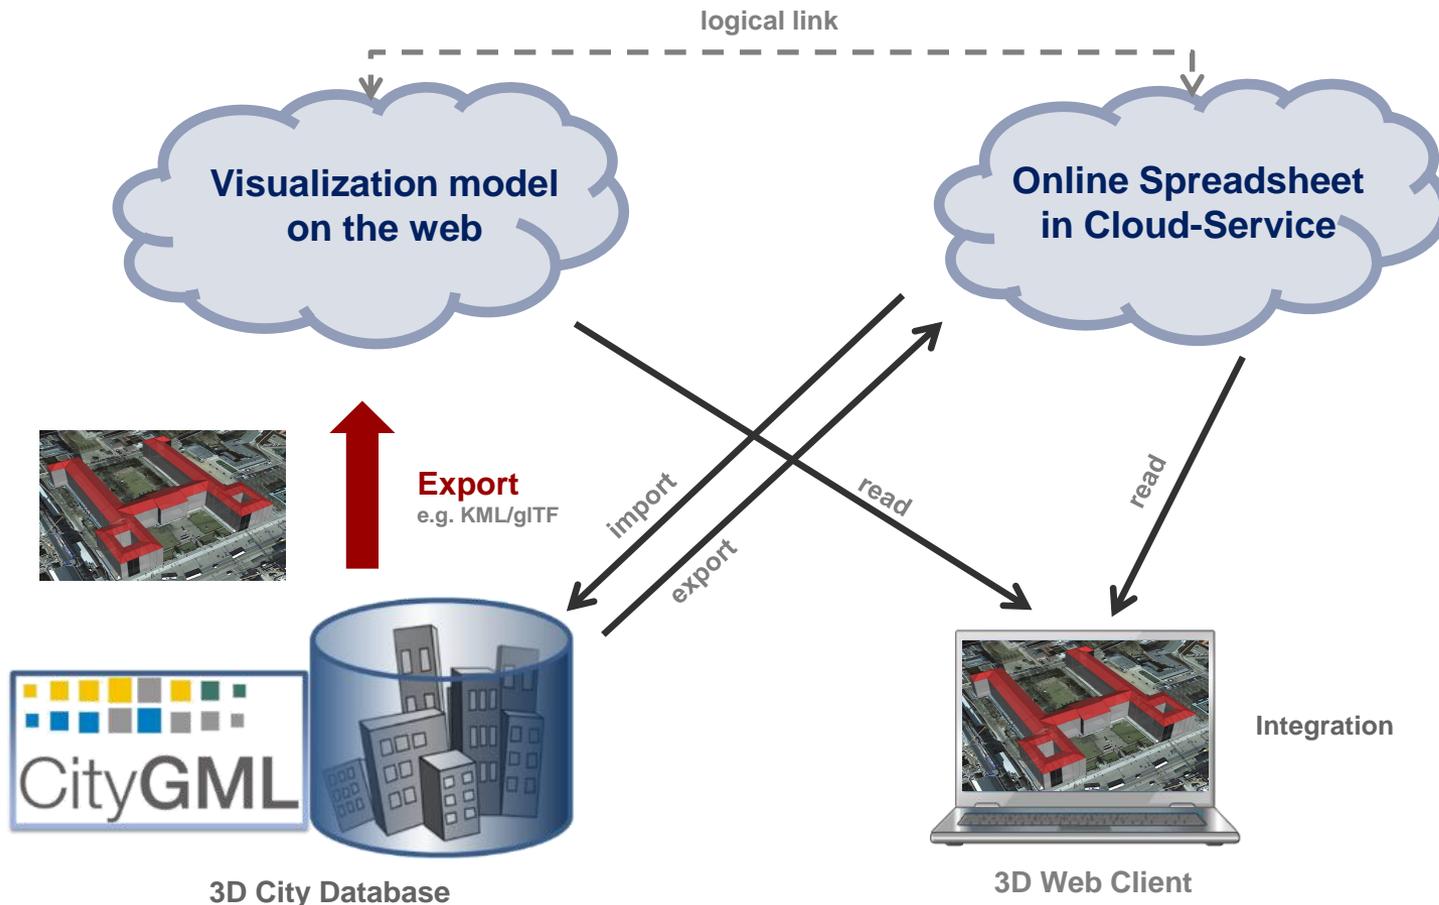

Efficient determination of which data tiles should be loaded

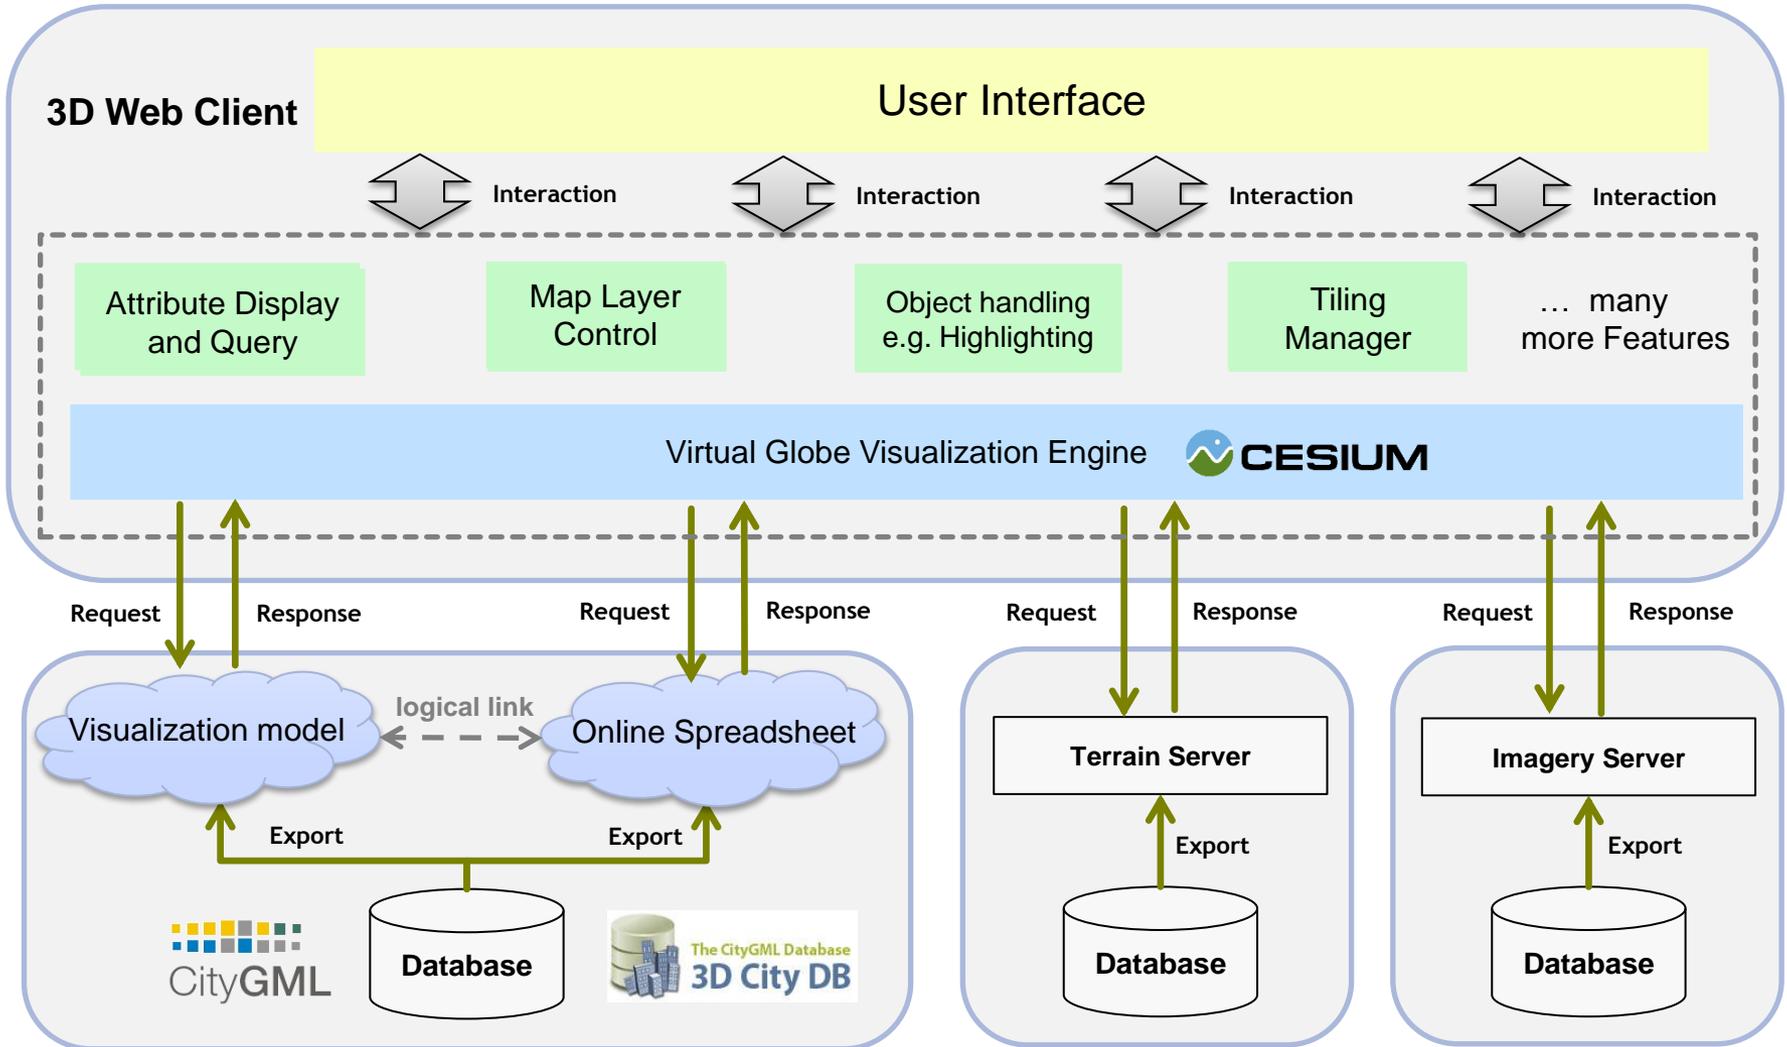

**We need to find a way for
interactive 3D visualization and
exploration of 3D city models on
the web...**

General concept: Coupling of Cloud Service and 3DCityDB

System Architecture of the 3D Web Client

Practical Exercise

Course Data (1)

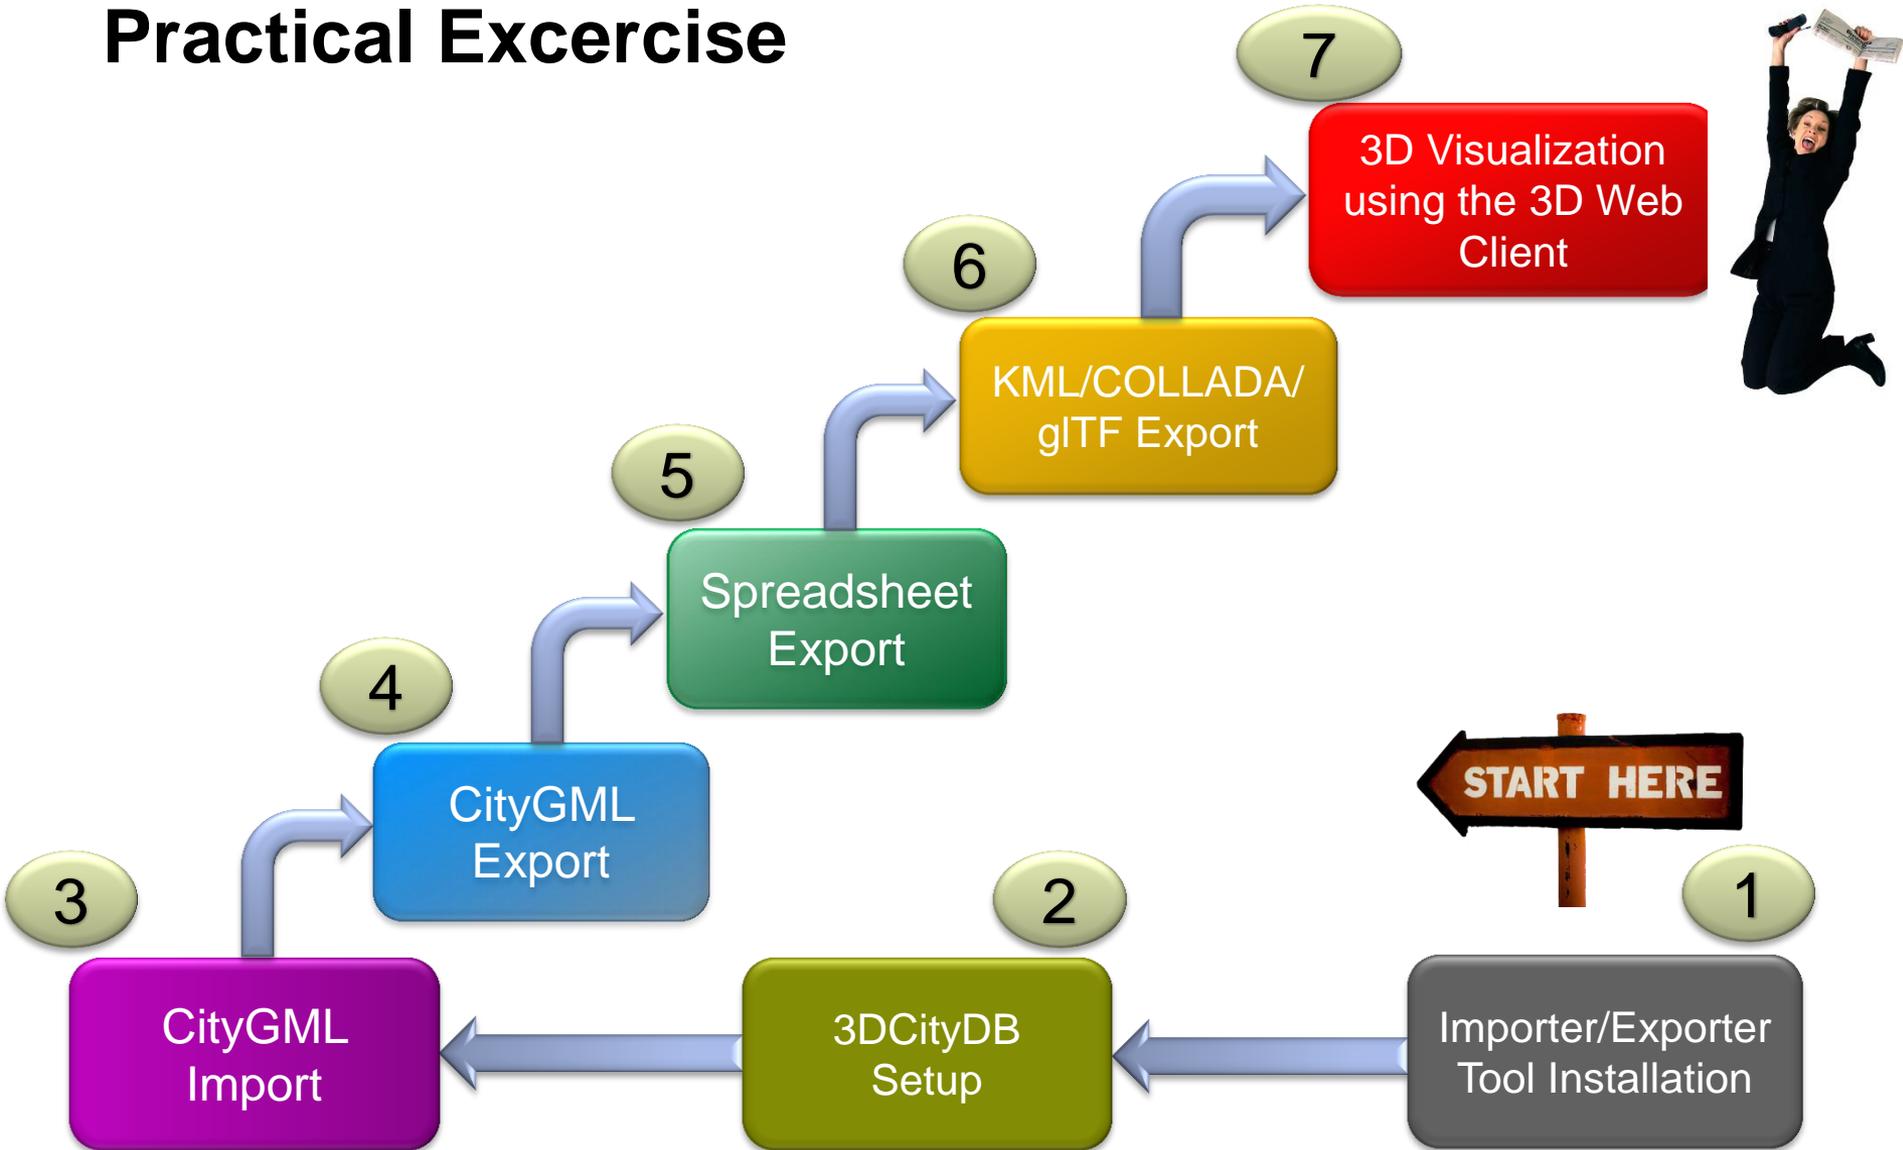

- ▶ **City**
 - Berlin
- ▶ **Format**
 - CityGML (.gml)
- ▶ **Spatial Reference**
 - SRID: 25833
- ▶ **Feature Type**
 - Building
- ▶ **Number of Buildings**
 - 954

Course Data (2)

Practical Exercise

Practical Exercise – Example Results (1)

The screenshot shows the FME Data Inspector interface. The central view displays a 3D model of a building with a red roof and a tall spire. The left pane shows a tree view with the following structure:

- View 1 (6)
 - Berlin_Building_Out...
 - Address (1)
 - Building (1)
 - CityModel (1)
 - GroundSurface...
 - RoofSurface (1)
 - WallSurface (1)

The right pane, titled 'Feature Information', shows the following properties and values:

Property	Value
Properties	
Feature Type	WallSurface
Coordinate System	EPSG:25833
Dimension	3D
Number of Vertices	880
Bounding Box	
Minimum Values	390346.352865199, 5822064.53817986, 36...
Maximum Values	390400.9665929, 5822125.887574, 80
Attributes	
citygml_creation...	2016-04-04
citygml_feature...	boundedBy
citygml_level_of...	2
citygml_target_u...	http://www.opengis.net/citygml/building...
fme_geometry	fme_aggregate
fme_type	fme_surface
gml_id (utf-16)	BLDG_131859
gml_parent_id (u...	BLDG_0003000b0009a940
xml_type	xml_surface
Geometry	
IFMEMultiSurface	59 Surface(s)
Name (utf-16)	lod2MultiSurface
Geometry Traits	
4 Trait(s)	
Surface 1 of 59...	
Surface 2 of 59...	
Surface 3 of 59...	
Surface 4 of 59...	
Surface 5 of 59...	
Surface 6 of 59...	
Surface 7 of 59...	
Surface 8 of 59...	
More ...	

The bottom pane shows a table view with the following data:

citygml_address	tygml_feature_rol	citygml_target_uri	gml_id	gml_parent_id	xml_type	
1	<?xml version=...	address	http://www.op...	UUID_b646921d...	BLDG_0003000b...	xml_no_geom

The status bar at the bottom indicates the current location: X: 36, Y: -107.

Practical Exercise – Example Results (2)

The screenshot shows a web-based 3D City Model viewer. A specific building is highlighted in yellow. A metadata panel on the right displays the following information:

BLDG_0003000b0009a940	
GMLID	BLDG_0003000b0009a940
Building_Height	82
Building_Height_Unit	urn:ogc:def:uom:UCUM::m
Street_Name	Feldstr.
House_Number	19
Denkmal_Art	Baudenkmal

The interface includes a toolbox on the left with options like 'Show / Hide Toolbox', 'Add / Configure Layer', 'Add WMS-Layer', 'Add Terrain-Layer', 'Choose highlighted Object', 'Choose hidden Object', 'Generate Scene Link', 'Clear Highlighting', 'Create Screenshot', and 'Show the selected object in External Maps'. The map shows an aerial view of a city street with labels like 'Gartenstraße', 'Ackerstraße', and 'Feldstraße'. A scale bar indicates 10 m. The bottom status bar shows 'Number of showed Tiles: 9' and 'Number of cached Tiles: 9'.

Practical Exercise – Example Results (3)

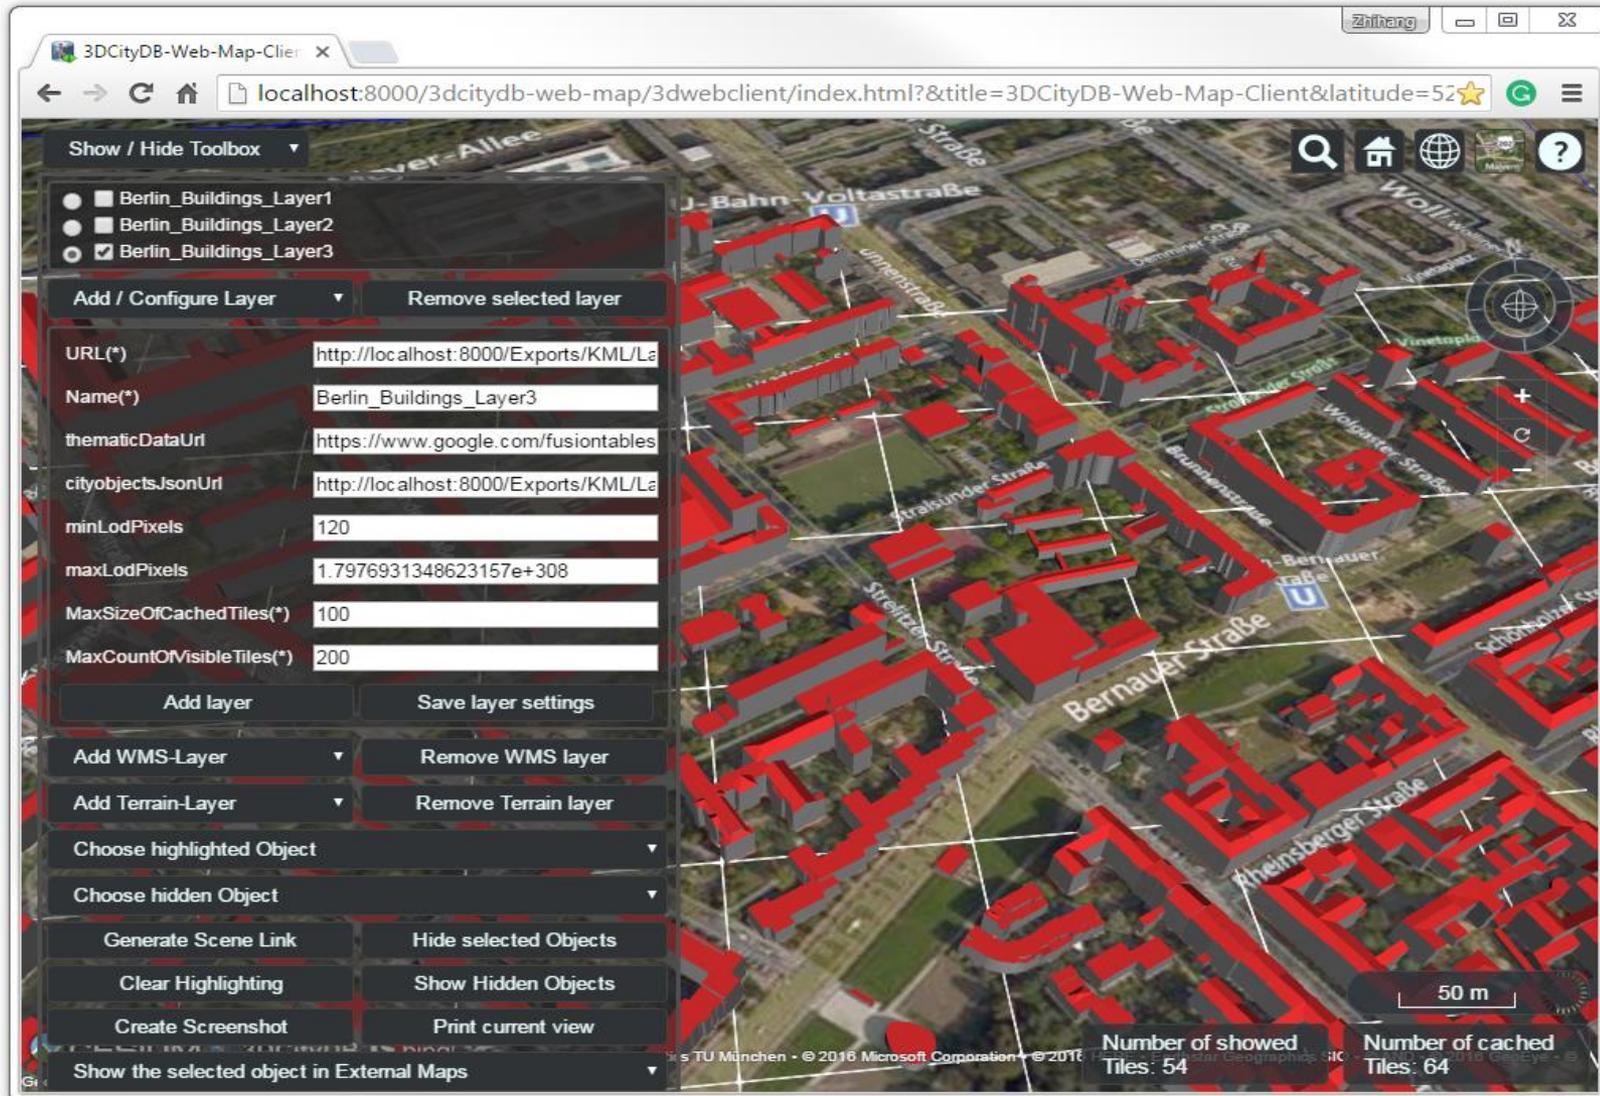

The screenshot displays the 3DCityDB-Web-Map-Client interface. The main view shows a 3D city model of Berlin with a yellow buildings layer. The interface includes a toolbox on the left with the following options:

- Show / Hide Toolbox
- Berlin_Buildings_Layer1 (checked)
- Add / Configure Layer
- Remove selected layer
- URL(*)
- Name(*)
- thematicDataUrl
- cityobjectsJsonUrl
- minLodPixels
- maxLodPixels
- MaxSizeOfCachedTiles(*)
- MaxCountOfVisibleTiles(*)
- Add layer
- Save layer settings
- Add WMS-Layer
- Remove WMS layer
- Add Terrain-Layer
- Remove Terrain layer
- Choose highlighted Object
- Choose hidden Object
- Generate Scene Link
- Hide selected Objects
- Clear Highlighting
- Show Hidden Objects
- Create Screenshot
- Print current view
- Show the selected object in External Maps

The status bar at the bottom indicates:

- Number of showed Tiles: 54
- Number of cached Tiles: 99

Practical Exercise – Example Results (4)

Let's start the practical exercise now!
