

NERO GRAV

New Refined Observations of Climate Change from Spaceborne Gravity Missions

International Spring School
Neustadt an der Weinstraße, Germany, March 10-14, 2025

Practical 4: Regional analysis of gridded total water storage data

Christian Mielke & Anne Springer (University of Bonn)

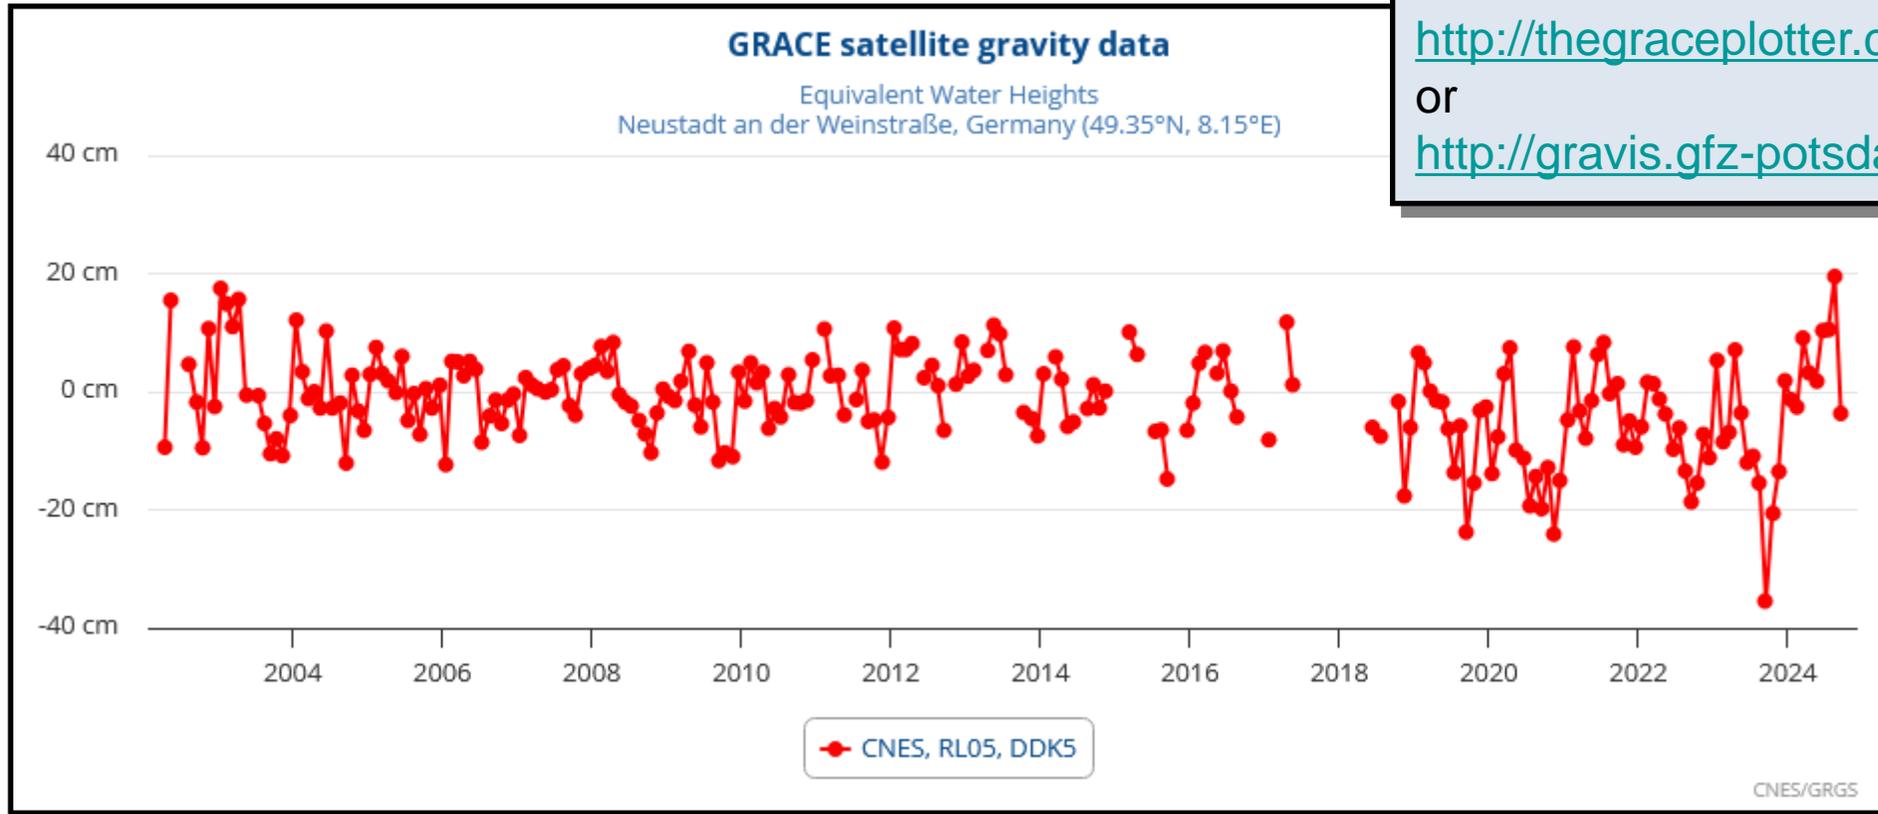

Technische
Universität
München

Regional analysis of gridded total water storage data

Title	Gravity functional	Data set	Area	Latitude	Longitude	Address	Regression	Scale	Bias
Series 1	Water heights	CNES RL05 DDK5	Point	49.350186	8.148689	Neustadt an der	None	1	0

Regional analysis of gridded total water storage

Exercise 1: Investigation of TWSA in selected hydrological catchments

→ Amazon, Brahmaputra, Danube, Volta: TWSA time series with special features.

Exercise 2: Investigation of ice mass changes

→ Compute your own trend of ice mass loss in Greenland!

Exercise 3: Investigation of a mysterious signal

→ What is going on in West Malaysia?

Exercise 4: Dealing with the leakage effect

→ Annoying and still an issue: we are looking forward to your solution!

Exercise 5 (optional): Computation of drought severity indices

→ Can you detect exceptional, severe and extreme droughts over South Africa?
